Naming Scheme

... Is necessarily a bit ad-hoc, as each new asset (project) can be of a different type than the last. With Noa, AWS suggested "studio-show-assettype-assetname". But perfect consistency here is unnecessaary.

Thus far we have:

Asset URL prefix	Web page URL	Official name (in License)	Web page title	Category (*)	Versioning scheme	Remarks
asc-stem2	asc-stem2	StEM2	ASC StEM2 - Standard Evaluation Material 2 STEM2	Image Seq.		
aws-spanner-char-noa	noa	AWS Noa Character	<same>	3D		
intel-cloud-library	intel-cloud-library	Intel® Volumetric Clouds Library	<same>	3D Volumetric		
usd-alab	alab	Animal Logic ALab	Animal Logic ALab – USD Production Scene	3D		
alab-trailer	alab-trailer	Animal Logic ALab Trailer	tbd	Image Seq.		
4004-moore-lane	4004-moore-lane	4004 Moore Lane 3D Scene	tbd	3D		from Intel

(*) Cf. the Category column in the Links to Open Assets table.
